

2017 Exclusive MIPS Measures

Measure	Measure Title	Measure Description	NQS Domain	Numerator	Denominator	High	Outcome
1	Critical test: Aortic Dissection	Adherence to Critical Test Protocol: Aortic Dissection.	Communication and Care Coordination	Number of Critical Tests a radiologist reads to diagnose Aortic Dissection that were reported to the ordering clinician within 30 minutes of procedure order	Number of Critical Tests a radiologist reads to diagnose Aortic Dissection	High Priority	Outcome
2	Critical test: Intracranial Hemorrhage	Adherence to Critical Test Protocol: Intracranial Hemorrhage.	Communication and Care Coordination	Number of Critical Tests a radiologist reads to diagnose Intracranial Hemorrhage that were reported to the ordering clinician within 30 minutes of procedure order	Number of Critical Tests a radiologist reads to diagnose Intracranial Hemorrhage	High Priority	Outcome
3	Critical test: OR Foreign Body	Adherence to Critical Test Protocol: OR Foreign Body.	Communication and Care Coordination	Number of Critical Tests a radiologist reads to diagnose OR Foreign Body that were reported to the ordering clinician within 30 minutes of procedure order	Number of Critical Tests a radiologist reads to diagnose OR Foreign Body	High Priority	Outcome
4	Critical test: Stroke	Adherence to Critical Test Protocol: Stroke.	Communication and Care Coordination	Number of Critical Tests a radiologist reads to diagnose Stroke that were reported to the ordering clinician within 30 minutes of procedure order	Number of Critical Tests a radiologist reads to diagnose Stroke	High Priority	Outcome
5	Critical Result: Acute Ocular injury	Efficiency of reporting Critical Result: Acute Ocular Injury diagnosed on radiology exams	Patient Safety	Number of trauma exams a radiologist reads indicating Acute Ocular Injury that were reported to the ordering clinician within 30 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate Acute Ocular Injury	High Priority	
6	Critical Result: Aortic Dissection	Efficiency of reporting Critical Result: Aortic Dissection diagnosed on radiology exams	Patient Safety	Number of exams a radiologist reads indicating Aortic Dissection that were reported to the ordering clinician within 15 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate Aortic Dissection	High Priority	
7	Critical Result: Cord Compression	Efficiency of reporting Critical Result: Cord Compression diagnosed on radiology exams	Patient Safety	Number of exams a radiologist reads indicating Cord Compression that were reported to the ordering clinician within 40 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate Cord Compression	High Priority	
8	Critical Result: Ectopic Pregnancy	Efficiency of reporting Critical Result: Ectopic Pregnancy diagnosed on radiology exams	Patient Safety	Number of exams a radiologist reads indicating Ectopic Pregnancy that were reported to the ordering clinician within 20 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate Ectopic Pregnancy	High Priority	
9	Critical Result: CTA of GI bleed	Efficiency of reporting Critical Result: GI Bleed diagnosed on radiology exams	Patient Safety	Number of exams a radiologist reads indicating GI Bleed that were reported to the ordering clinician within 40 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate GI Bleed	High Priority	
10	Critical Result: ICH	Efficiency of reporting Critical Result: ICH diagnosed on radiology exams	Patient Safety	Number of exams a radiologist reads indicating ICH that were reported to the ordering clinician within 35 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate ICH	High Priority	
11	Critical Result: New Deep Venous Thrombosis (DVT)	Efficiency of reporting Critical Result: New DVT diagnosed on radiology exams	Patient Safety	Number of exams a radiologist reads indicating New DVT that were reported to the ordering clinician within 25 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate New DVT	High Priority	
12	Critical Result: Occlusive Intracranial Stroke	Efficiency of reporting Critical Result: Occlusive intracranial stroke diagnosed on radiology exams	Patient Safety	Number of exams a radiologist reads indicating Occlusive intracranial stroke that were reported to the ordering clinician within 30 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate Occlusive intracranial stroke	High Priority	Outcome
13	Critical Result: Placental abruption	Efficiency of reporting Critical Result: Placental abruption diagnosed on radiology exams	Patient Safety	Number of exams a radiologist reads indicating Placental abruption that were reported to the ordering clinician within 30 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate Placental abruption	High Priority	
14	Critical Result: Positive bleeding scan	Efficiency of reporting Critical Result: Positive Bleeding Scan	Patient Safety	Number of times a radiologist reads indicating Positive Bleeding Scan that were reported to the ordering clinician within 40 minutes of exam completion	Number of times a radiologist reads a positive bleeding scan	High Priority	Outcome
15	Critical Result: Pulmonary Embolism	Efficiency of reporting Critical Result: Pulmonary Embolism diagnosed on radiology exams	Patient Safety	Number of exams a radiologist reads indicating Pulmonary Embolism that were reported to the ordering clinician within 40 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate Pulmonary Embolism	High Priority	
16	Critical Result: Ruptured Ectopic Pregnancy	Efficiency of reporting Critical Result: Ruptured ectopic pregnancy diagnosed on radiology exams	Patient Safety	Number of exams a radiologist reads indicating Ruptured Ectopic Pregnancy that were reported to the ordering clinician within 10 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate Ruptured ectopic pregnancy	High Priority	
17	Critical Result Protocol	Timeliness of notification in cases of Critical Results	Patient Safety	Number of Critical Results a radiologist reads that were reported to the ordering clinician within 40 minutes of exam completion	Number of diagnostic exams a radiologist reads that demonstrate a Critical Result	High Priority	
18	Result Requiring Follow Up Protocol	Timeliness of notification in cases of diagnostic exams when there is a recommendation to obtain a follow up exam.	Effective Clinical Care	Number of diagnostic exams a radiologist reads indicating a result requiring follow up when the referring clinician is notified within 36 hours of exam completion	Number of diagnostic exams a radiologist reads that require follow up exams.		
19	Unexpected Result Protocol	Timeliness of notification in cases of Unexpected Results	Patient Safety	Number of diagnostic exams a radiologist reads indicating an Unexpected Result when the referring clinician is notified within 72 hours of exam completion	Number of diagnostic exams a radiologist reads that demonstrate unexpected results	High Priority	
20	Urgent Result Protocol	Timeliness of notification in cases of Urgent Results	Patient Safety	Number of diagnostic exams a radiologist reads indicating an Urgent Result when the referring clinician is notified within 60 minutes of exam completion. Diagnoses include: First diagnosis of Breast Cancer Abscess Carotid Stenosis (Critical or pre occlusive) Dislocated Lens Fetal Demise	Number of diagnostic exams a radiologist reads that demonstrate an Urgent Result	High Priority	
21	Critical Test Protocol	Timeliness of procedure performance, interpretation and report delivery for diagnostic tests ordered as Critical Tests.	Communication and Care Coordination	Number of Critical Tests (under Critical Test Protocol established by the practice and/or facility) a radiologist reads that were reported to the ordering clinician within 30 minutes of	Number of critical tests a radiologist reads.	High Priority	Outcome
